Diabetes Run Certificate

This certificate records the scenario-country runs present in the source validation-run JSON. It is runtime execution evidence, not a claim that the model agrees with OneHealth Tool, Spectrum, or any other external comparator.

Run Identity

Status	pass
Run id	all-scenarios-default-20260602b
Model card	model-card:ncd-diabetes:client-manifest-current:v1
Scenario scope	all
Country scope	default
Rows certified	44
Status definition	pass means the Rust runner exited successfully and emitted result rows for the scenario-country run
Generated file retention	temporary materialised models, data bundles, and result CSVs are discarded after hashing and headline extraction
Source run file	65c637e60967e15878c9a8df7fb5748936c7465d0a9f0be25c0345320e84902d

Warnings

This certificate records runtime execution evidence only. It does not compare model outputs with OneHealth Tool, Spectrum, Appendix 3 reference outputs, or another external comparator. Generated data bundles are identified by hashes in the run JSON, but the hosted unified API/datafetcher source version that produced them is not pinned in this certificate.
