Clinical Intervention - Intensive Glycaemic Control

Intensive glycaemic control intervention for people with diabetes to prevent microvascular complications. This intervention works by maintaining optimal blood glucose levels through intensive medication management and glucose monitoring. The intervention reduces progression from diabetes to diabetic nephropathy, retinopathy, and other complications by providing intensive glucose control for patients requiring more aggressive management.

Scope

This is a manifest-level scenario card. If the scenario file contains a Country value, that value is the scenario authoring default; the run certificate records the countries actually materialised and executed. **Scenario Parameters**
