Clinical Intervention - Standard Glycaemic Control

Standard glycaemic control intervention for people with diabetes to prevent microvascular complications. This intervention works by maintaining optimal blood glucose levels through medication management and glucose monitoring. The intervention reduces progression from diabetes to diabetic nephropathy, retinopathy, and other complications by providing systematic glucose control with standard home glucose monitoring for insulin-treated patients.

Scope

This is a manifest-level scenario card. If the scenario file contains a Country value, that value is the scenario authoring default; the run certificate records the countries actually materialised and executed. **Scenario Parameters**
